## DETAILED ACTION

### *Election/Restrictions*

1. Claims 1 and 11 are directed to an allowable clamping tool for use with a power tool. Pursuant to the procedures set forth in MPEP § 821.04(B), claims 3-10 and 13-19, directed to the clamping tool for use with a power tool with the pin having two flat surfaces, substantially circular housing, the retaining section including a slot, rotary saw power tool, engaging section being a serrated member and the engaging section being L-shaped member, previously withdrawn from consideration as a result of a restriction requirement, are hereby rejoined and fully examined for patentability under 37 CFR 1.104.

Because all claims previously withdrawn from consideration under 37 CFR 1.142 have been rejoined, **the restriction requirement as set forth in the Office action mailed on 10/28/08 is hereby withdrawn.** In view of the withdrawal of the restriction requirement as to the rejoined inventions, applicant(s) are advised that if any claim presented in a continuation or divisional application is anticipated by, or includes all the limitations of, a claim that is allowable in the present application, such claim may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application. Once the restriction requirement is withdrawn, the provisions of 35 U.S.C. 121 are no longer applicable. See *In re Ziegler*, 443 F.2d 1211, 1215, 170 USPQ 129, 131-32 (CCPA 1971). See also MPEP § 804.01.

### **EXAMINER'S AMENDMENT**

2. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with the Applicant's Attorney (Mr. James Slattery, Reg. #2830) on 10/21/09.

The application has been amended as follows:

In the claims:

In Line 8 of Claim 1, "housing; and" has been changed to --housing;--.

In Line 11 of Claim 1, "therebetween;" has been changed to --therebetween; and a pin comprising a head and a shank portion, at least a flat planar side on the shank portion having a predetermined width and extending along a predetermined length of the shank portion, said at least the flat planar side being selectively received within said engaging portion for selectively retaining locking pliers in the movable relationship relative to the housing and selectively permit disengagement of the locking pliers relative to the housing, said at least the flat planar side being positioned at a 90° angle relative to a cutting edge of a power tool for preventing disengagement of the locking pliers during a cutting operation;--.

Claim 2 has been cancelled.

In Line 8 of Claim 11, "housing; and" has been changed to --housing;--.

In Line 8 of Claim 12, "therebetween;" has been changed to --therebetween; and

a pin comprising a head and a shank portion, at least a flat planar side on the shank portion having a predetermined width and extending along a predetermined length of the shank portion, said at least the flat planar side being selectively received within said engaging portion for selectively retaining locking pliers in the movable relationship relative to the housing and selectively permit disengagement of the locking pliers relative to the housing, said at least the flat planar side being positioned at a 90° angle relative to a cutting edge of a power tool for preventing disengagement of the locking pliers during a cutting operation;--.

Claim 12 has been cancelled.

***Allowable Subject Matter***

3. Claims 1, 3-11 and 13-19 are allowed.

***Reasons for Allowance***

4. The following is an examiner's statement of reasons for allowance: The claims are allowable because prior art fails to teach a clamping tool for use with a power tool, comprising a pin with at least a flat planar side on the shank portion having a predetermined width and extending along a predetermined length of the shank portion, said at least the flat planar side being selectively received within said engaging portion for selectively retaining locking pliers in the movable relationship relative to the housing and selectively permit disengagement of the locking pliers relative to the housing, said at least the flat planar side being positioned at a 90° angle relative to a cutting edge of a power tool for preventing disengagement of the locking pliers during a cutting operation,

Art Unit: 3724

in combination with other limitations set forth in claims 1 & 11, and with the other limitations of the dependent claims.

Re claims 1 and 11, Ramey discloses a clamping tool for use with a power tool per Figs. 1-4 comprising: a housing 11 adapted to be mounted on a power tool 11, said housing including at least one engaging portion 25 as fastening means per col. 3, lines 14-20; a locking pliers 28 having a retaining section with a proximal end 26 and a distal end 27, said proximal end being adapted to be selectively, releasably mounted on the at least one engaging portion to selectively retain the locking pliers 28 in a movable relationship relative to the housing 11 and to selectively permit disengagement of the locking pliers relative to the housing 11; and an engaging section 31 of said locking pliers being pivotally mounted at pivot 33 adjacent to the retaining section 30 for selectively being locked relative to the retaining section of the locking pliers for positioning an article 31 therebetween; wherein when an article is locked relative to the retaining section 30 and the engaging section 31 of the locking pliers 28, the proximal end of said retaining section 30 can be rotated relative to the housing 11 to permit a power tool 17 to come into engagement with an article 31 while enabling the proximal end of the retaining section to be selectively, releasably disengaged from the housing 11 thereafter per figs. 1-4.

However, Neither Ramey nor Selander nor Vail teaches a pin with at least a flat planar side on the shank portion having a predetermined width and extending along a predetermined length of the shank portion, said at least the flat planar side being selectively received within said engaging portion for selectively retaining locking pliers in

Art Unit: 3724

the movable relationship relative to the housing and selectively permit disengagement of the locking pliers relative to the housing, said at least the flat planar side being positioned at a 90° angle relative to a cutting edge of a power tool for preventing disengagement of the locking pliers during a cutting operation.

None of these and the prior arts of record references by themselves or in combination with the other prior art cited teach the claimed invention set forth in claim 1 and 11.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

### ***Conclusion***

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Ramey (3861035), Selander (3284895) and Vail (3093023) teach various cutting devices with clamping and locking plier's arrangement, and Lemmens (6128943) teaches a pin having a planar surfaces.

7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to BHARAT C. PATEL whose telephone number is (571)270-3078. The examiner can normally be reached on Monday-Friday, alt. Friday off.
